

Seamless SPACE

↑ 1 - SquareFormed cavity slider with NewYorker door.

SquareFormed™

Cavity sliders are all about space. The term 'cavity slider' refers to the cavity pocket (incl. track + carriages) installed within wall framing that allows a door to **<slide>** inside the wall. The benefit is a solution that leaves clear space on both sides of the wall and opening, encouraging cohesion between spaces.

The **CS SquareFormed** cavity slider combines the CS SquareStop Split Jamb with Full-Height and NoClosingJamb detail.

Makes finishing
on site quicker,
easier, neater
and stronger

This complete solution provides a seamless, clean flow around doorways and is ideal for large room dividers or areas such as hallways where you want a discreet door that is rarely closed.
